No Bag / Add Own Bag Verification

No Bag Verification (this text field switches to "Add Own Bag Verification" when toggle is hit)

Green = Verify   Red = Not Verified

Station 1 (button)	Station 2 (button)	Station 3 (button)
Station 4 (button)	Station 5 (button)	Station N (button)

Go Back (button)

Toggle (button)

In the current GUI, no bag and own bag verification are done in 1 screen. I believe this is a good idea as both deal with bags. Ensure that once the toggle is clicked, the selection is saved for the option you were previously verifying (ex. if you were verifying own bags and had selected station 1, and now hit the toggle to switch to verify no bags, station 1 should not be selected; if you toggle back to verify own bags, station 1 is selected there). Stations start off as red; different color outlines indicate different things as mentioned in the diagram.
